

My experience in the Erasmus

17/10/22-21/10/22

the project

This year's Erasmus project was focused on the world of work and its aspects. In the days when the French and Portuguese guys were here, we took them to visit some companies and small businesses in our area. We divided into small groups and separated in the various shops of our town, San Martino in Strada. Some of us went to a pub, some to a bakery, some to a butcher and some to a beauty salon.

the activities

Speaking of my experience, I have been in the beauty center. There was this girl who was a professional beautician, she even had awards. She showed us some of her facial cleansing machines and the manicure station. It was very interesting because she explained all the steps of a complete facial cleansing and thanks to the translations of our teachers, foreign students were also involved. In the following days we visited the Erbolario company, the famous brand of selfcare products. This experience was also incredibly beautiful and interesting. I had already visited the factory with my family but seeing it again and hearing more about it was very nice. The translations were fast, and the foreign kids understood easily. The next day we visited a company that dealt with roller shutter systems. This company, called Pellini, has patented an innovative system which consists in inserting a curtain inside two glass plates. They explained to us why they made this choice, and it was fascinating. Even if I didn't go abroad, this Erasmus experience was fantastic.
